

## Plugin Implementation Instructions for Limelight Customers

To start tracking Limelight videos in StreamHub, please follow these implementation instructions. All you need is a StreamHub Analytics ID, which you can get from your account manager.

### Implementation Instructions

Follow the instruction in <http://support.video.limelight.com/support/docs/embedding/> and embed your limelight player into your html page.

Here is an example of an embed code generated by Limelight studio:

```
<span class="LimelightEmbeddedPlayer">
  <script src="//video.limelight.com/player/embed.js"></script>
  <object type="application/x-shockwave-flash"
    id="limelight_player_320698"
    name="limelight_player_320698"
    class="LimelightEmbeddedPlayerFlash"
    width="480"
    height="321"
    data="//video.limelight.com/player/loader.swf">
    <param name="movie" value="//video.limelight.com/player/loader.swf"/>
    <param name="wmode" value="window"/>
    <param name="allowScriptAccess" value="always"/>
    <param name="allowFullScreen" value="true"/>
    <param name="flashVars"
value="playerForm=Player&mediaId=c74f2f0203ee496ca9f16c628bf1af3e"/>
  </object>
  <script>LimelightPlayerUtil.initEmbed('limelight_player_320698');</script>
</span>
```

Locate the last <script> and add a link to the StreamhubAnalytics plugin for Limelight as this:

```
<script src="//static.streamhub.tv/limelight/plugin.js"></script>
```

Now add a <param> tag to the embed code in order to provide the analyticsId required to track your video content.

here is an example with a fictional analyticsId named 'demos':

```
<param id="StreamhubAnalyticsId" value="demos"/><!-- your analytics id -->
```

The tag has to have an id 'StreamhubAnalyticsId' and the value is the actual analyticsId string given by your account manager.

Your embed code should now look like this:

```
<span class="LimelightEmbeddedPlayer">
  <script src="//video.limelight.com/player/embed.js"></script>
  <object type="application/x-shockwave-flash"
    id="limelight_player_320698"
    name="limelight_player_320698"
    class="LimelightEmbeddedPlayerFlash"
    width="480"
    height="321"
    data="//video.limelight.com/player/loader.swf">
    <param name="movie" value="//video.limelight.com/player/loader.swf"/>
    <param name="wmode" value="window"/>
    <param name="allowScriptAccess" value="always"/>
    <param name="allowFullScreen" value="true"/>
    <param id="StreamhubAnalyticsId" value="demos"/><!-- your analytics id -->
    <param name="flashVars"
value="playerForm=Player&mediaId=c74f2f0203ee496ca9f16c628bf1af3e"/>
  </object>

  <script>LimelightPlayerUtil.initEmbed('limelight_player_320698');</script>
  <script src="//static.streamhub.tv/limelight/plugin.js"></script>
</span>
```

That's it. You are all set up !
