

Streamhub Analytics plugin for Video.js

In order to add the Streamhub Analytics plugin to your Video.js players, all you need is a few clicks and your identifiers that you can request from your Streamhub account manager.

Integration time: 5 minutes

Add a script tag to your HTML page

```
<!-- StreamhubAnalytics plugin for Video.js →  
<script src="http://static.streamhub.tv/videojs/plugin.js"></script>
```

Add a bit of Javascript to configure the plugin with your Streamhub identifiers

```
<script>  
  
    // Assuming you have a video element on your page with an id="my-video" attribute  
    var player = videojs( 'my-video );  
    player.StreamhubAnalytics({ analyticsId: "your-analyticsId",  
                                partnerId: "your-partnerId",  
                                publicId: "the-video-identifier",  
                                playerId: "your-playerId",  
                                isLive: false }); // true or false  
  
</script>
```

That's all. You can start sending stat reports to our collector.

If you don't have your Streamhub identifiers yet, contact a Streamhub integration engineer ;
